

Toyota Forklift Part

Toyota Forklift Parts - In the U.S., Toyota Materials Handling inc., or TMHU, has been the top selling lift truck supplier since 1992. This business has been situated out of Irvine, California for well over 40 years, providing a complete line of quality lift trucks. With an impressive reputation of resilience and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the keystone of Toyota's renowned Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S. are built here.

All Toyota's manufacturing facilities within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its dedication to continual progress, and its environmental methods. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift vehicles emit 70% fewer smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its commitment to produce high quality lift vehicles while providing superb customer assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also called TICO, is listed in Fortune Magazine as the world's biggest lift truck dealer and is amongst the magazines impressive World's Most Admired Companies.

Redefining Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not a lot of other companies and no other lift truck producer can meet Toyota's record of caring for the natural environment while simultaneously stimulating the economy. Environmental responsibility is a key aspect of corporate decision making at Toyota and they are proud to be the first and only producer to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift trucks. Yet an added reason they remain a leader within the industry.

In 2006, Toyota launched the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission principles, and also meets California's more elaborate 2010 emission standards. The end invention is a lift vehicle that produces 70% less smog forming emissions than the present Federal standards allow.

Moreover in 2006, Toyota established an affiliation with the Arbor Day Foundation, furthering their responsibility to the environment. Greater than 57,000 trees have been planted in regional parks and national forests damaged by natural reasons such as fires, as a product of this relationship. 10,500 seedlings have also been circulated through Toyota Industrial Equipment's network of sellers to non-profit organizations and local consumers to help sustain communities all over the U.S.

Toyota's lift trucks provide enhanced productivity, visibility, ergonomics and durability, and most notably, the industry's leading safety technology. The company's System of Active Stability, also called "SAS", helps limit the possibility of mishaps and injuries, and increasing productivity levels while minimizing the potential for product and equipment damage.

System Active Stability senses various factors that could lead to lateral instability and likely lateral overturn. When one of those conditions are detected, SAS instantly engages the Swing Lock Cylinder to steady the rear axle. This changes the lift truck's stability footprint from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to prevent injuries or accidents while adding durability.

SAS was originally introduced to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS continues to be integrated into nearly all of Toyota's internal combustion models. It is standard equipment on the latest 8-Series. There are more than 100,000 SAS-equipped lift trucks in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with required worker education, overturn fatalities across all brands have decreased by 13.6% since 1999. Also, there have been an overall 35.5% fall in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's pattern of excellence reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training course to help consumers meet OSHA standard 1910.178. Training courses, video tutorials and various materials, covering a broad scope of subjects-from personal safety, to OSHA regulations, to surface and load situations, are offered through the supplier network.

Toyota has sustained a relentless existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift truck. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America at the moment are manufactured in the United States.

Based in Columbus, Ind., the Toyota Industrial Equipment Mfg. campus equals 998,000 square feet of facilities across 126 acres. Facilities include a National Customer Center, as well as manufacturing operations and distribution centers for equipment and

service parts, with the entire commitment exceeding \$113 million dollars.

The new National Customer Center was conceived to serve both dealers and clients of TMHU. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its founder, Sakichi Toyoda, in 1867, and lastly a education center.

The NCC embodies Toyota's dedication to offering top-notch client service. TMHU's 68 certified Toyota Industrial Equipment, or TIE dealers, along with 189 dealership locations all over the U.S, present the most wide-ranging and inclusive client service and support in the industry. The company's new and Licensed Used lift vehicles, service, components, and financing features make Toyota dealerships a one-stop shop to guarantee overall customer satisfaction.
