

Drum Clamps

Drum Clamp - Forklifts are meant to handle moving, lifting and storing pallets. For facilities that deal with items inside drums, you should make use of an attachment in order to lift, store and move them. There are several drum forklift accessories that you could obtain for all your drum lifting needs. These attachments are particularly used so as to deal with drum containers - hence there is no risk of damage to the item or drum container whenever they are lifted, stored or moved.

Drum Positioner And Grab

The drum positioner could be utilized in order to load and unload drums off of racks, drum stands and vehicles. These are obtainable in three or four tine models. This attachment is completely mechanical, thus enabling the operator to be able to operate all from the comfort of the forklift seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This accessory is intended for drum pyramid stacking.

The drum grab is fork designed and mounted with the sole objective of handling steel drums that have rolling hoops. Even though the reason for the design was to handle steel drums with rolling hoops, the drum grab can accommodate the transporting of extra large and large plastic drums. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is actually a forklift accessory which mounts on to the forks themselves. The objective of the drum rotator is to pick up the drum and turn it upside down. The drum fits in to the rotator utilizing a steel clamp which fits over the middle of the drum. The rotation is performed by either a continuous loop chain or a crank handle. The crank handle is intended for operations which occur beneath shoulder level. For operations that must happen higher than shoulder level, the continual circle chain will be used.

Drum tines are simple fork mounted attachment which could be meant for unstacking or stacking 210-liter metal drums. Stacking requires nothing elaborate, only simple horizontal positioning of the drums. The carriage-mounted attachments reduce the load center of the drums.

Automatic Tongs

Drum tongs are available in semi-automatic and automatic models. They are used in the open topped or tight head steel drum kinds. The drum forceps could be attached in a few ways to the lift truck. One method is to attach them underneath a fork-mounted hook. One more way is to connect them to a fork-mounted jib or a carriage mounted jib. Both the semi automatic and the automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the individual operating it to ever leave the seat of the lift truck.

Rim Grip Handler

The Rip Grip Drum Handler is the optimal choice for forklift attachments, whenever there is a necessity to stockpile drums with inadequate area obtainable. This particular attachment can be used on both 120L and 210L drums. The Rim Grip Handler operates by using metal jaws in order to hold the rim of the drum. It picks the drum up and puts it down without requiring any space between all of the drums. The typical unit used in the business is a zinc-plated handler, even though, this attachment is accessible in stainless steel for the food and drink industry.
